Title: Share-It!

Description: A shareconomy website where members list their personal knowledge/skills/resources that they'd be willing to share or trade. Then if someone needs something they can browse the site for someone with that particular skill or resource, such as someone that has the tools and/or know-how to help you tune your snowboard. The site would include location information so that you could find someone near you.

Platform/Environment: Python Django Framework integrated with MySQL

Programming Languages:

Language	Jake Levine	Yu Zhou	Christina Matteis	Daniel Nolan
Python	Intermediate	Intermediate	Intermediate	Intermediate
HTML	Beginner	Intermediate	Guru	Beginner
Javascript	Beginner	Beginner	Intermediate	Beginner
SQL	Intermediate	Beginner	Intermediate	Intermediate

Functionality:

- new user can create an account
- existing user can save personal skills or resources
- existing user can search for someone with desired skill/resource
- existing user can search by zip code to find a skill/resource near them
